NON-ISOLATED POINT-OF-LOAD DC-DC POWER MODULE

Product Overview

Digital POL

DGQ25A is a digital non-isolated POL power module that can achieve high efficiency, automatic compensation, fast transient response, PMBus communication and parallel operation. It can provide a programmable output voltage by using an external resistor or through PMBus command.

[Page 98](#)

Power Block

Power block DC-DC power modules are developed to address the ever-growing demands of increased current and power densities in networking applications while providing maximum flexibility for system configuration. Power block modules, containing all necessary power components with high power density, work with either digital or analog controllers. Multiple modules can be applied to power system, in parallel.

[Page 99](#)

Integrated POL

Integrated Point-of-Load power modules are designed in an industry standard, compact, IC-like, molded package. They are highly integrated and do not require external components to provide the point-of-load function. A copper pad on the back of the module, in close contact with the internal heat dissipation components, provides excellent thermal performance. All integrated POL power modules are manufactured by fully automatic assembly.

[Page 102-103](#)

DOSA Standard POL

DOSA POL power modules are designed in an industry standard footprint and pinout. Each provides programmable output voltage by using an external resistor. Some series have flexible and programmable tracking and sequencing features to enable a variety of startup voltage as well as sequencing and tracking between power modules. DOSA I POL power modules are available in SIP and SMD package. DOSA II POL power modules are packaged by SMD.

[Page 100-101](#)

Datacom POL

Compared with NC series products, the second generation of datacom POL power modules provide wide input range for more bus voltage point-of-load applications. Datacom POL power converters can cover output current from 3A to 80A to meet various demands.

ATCA Input Module

DIM series, dual redundant input power processing isolated DC/DC converter, provide up to 400 watts of power in an industry standard footprint and pinout. The DIM series are designed to simplify the task and reduce the board space of implementing dual redundant, hot swappable 48Vdc power distribution with EMI filtering and inrush current limiting for an ATCA (Advanced Telecommunications Computing Architecture) or other telecom boards. In addition to processing the dual redundant 48V bus, the DIM module also provides isolated auxiliary 3.3V, and/or 5V BLUE_LED power for other housekeeping functions. All models are fully protected from abnormal input/output voltage, current, and temperature conditions.

FEATURES

- Input UVLO, Main Output OCP, OTP, Management power: OCP,OTP and OVP
- Input OR'ing for the A/B dual input power feeds as well as A/B Enable signals
- Inrush protection and hot swap capability
- Integral EMI filter designed for the ATCA board to meet CISPR Class B
- Adjustable Hold Up Voltage
- For charging the external holdup capacitors resulting in significant board real estate savings and bleed resistor power dissipation
- I²C interface for data monitoring and reporting
- Hardware alarms via opto-isolators for loss of A or B Feeds/Fuse
- UL/cUL 60950-1
- ISO 9001, TL 9000, ISO 14001, QS9000, OHSAS18001 certified manufacturing facility
